A single mouse click on the required characteristics is all that is needed for programming. In combination with measuring machines and sensors from ZEISS, you receive a highperformance system from a single source. Thanks to a large number of options, ZEISS CALYPSO also offers the right tools for special requirements. In ZEISS CALYPSO, unlike other measuring programs, these characteristics are also the starting point for programming. Creating the measurement plan is easy to learn, targetoriented and efficient. This separation of characteristics and features makes ZEISS CALYPSO more flexible, faster and more userfriendly. The abbreviation stands for Product and Manufacturing Information. When using appropriate CAD interfaces with ZEISS CALYPSO PMI size, form and position tolerances contained as PMI in the CAD model can be implemented automatically in the form of measurement plans, hence considerably reducing the users workload. Use the report templates or generate your own reports or templates. The option ZEISS PiWeb reporting plus allows you to extend the contained statistics function from 10 to 1,000 measurements. The packages ZEISS PiWeb sbs and ZEISS PiWeb enterprise provide you with a complete system for webbased quality data management. Centrifuges. CALYPSO Software from ZEISS enables you to complete all your measuring tasks within one software suite. At the click of a mouse whether singlepoint or scanning, manual or CNC, 4th Axis Table support, indexing probe head and tool rack use, even communication to other devices such as robot or machine tool, CALYPSO is your answer. Whats new in CALYPSO 5.6 Inspection features curve slope, cam throw, curve length, curve form, surface area, profile, etc.

Fields of application 2D and 3D profiles, contours, cams, turbine and impeller blades, gearrotors Deviations from plan are marked in color on a 3D CAD image. Typical fields of application include medical implant, sheet metal and fiberglass body panels, molded containers and bottles, mold and die making, blade inspection, and any 3D profile in which freeform surfaces have to be inspected. Expand programming capability with the ability to parameterize with CALYPSO PCM. Use GearPro to measure Spur, Spline, Involute, Bevel and Worm gears relative to AGMA definitions. Report results in commonly accepted industry formats. BladePro with developed in partnership with the global leaders in turbine blade design and production. Traditionally difficult to quantify parameters related to leading and trailing edges, chord, torsion angle and more are only a click away. Yet many major CMM builders are delivering software that carries with it baggage from the late 1980's; baggage that limits efficiency and capability. Programming can be with or without CAD data. Some CAD data supported includes IGES, STEP, DXF, CATIA, ProE, UniGraphics, VDA and Solid Works. Along the way you will encounter relevant evaluation options to properly handle measurement data. CALYPSO will even run some video measuring machines like OGP SmartScopes. This capability enables your company to keep the old tub and just replace the water software. Suite options like CALYPSO Curve and Free Form directly address complex and nonprismatic geometry. Most popular SPC packages will operate in a real time environment with CALYPSO. And for the production environment, CALYPSO has been integrating with machine tool, EDM and robots around the world. You thus will benefit not only from shorter machine setup times, but also from greater accuracy and a considerably increased productivity. Invest in your production of the future stepbystep.

Do you achieve a maximum of 1000 erosion hours per year and thus tie down a specialist completely But this method poses problems. While the EDM machine is measuring the offset, it is not producing any parts. The accuracy of the measurement is less precise in direct comparison to a coordinate measuring machine. The quality of the workpiece thus decreases. The CMM thus enables the EDM machine to achieve a much higher degree of utilization while at the same time decreasing production and investment costs. The precision of production and gear metrology must go hand in hand. The analytical 3D gear model and the graphicsupported input windows make measuring with

GEAR PRO highly effective. A standard measurement can already be started on the basis of the geometry definition. En todas partes. Con las versiones gestionadas con bases de datos ZEISS PiWeb sbs y ZEISS PiWeb enterprise puede organizar el flujo de información de la Industria 4.0 y mejora así la calidad de sus productos y su productividad. Empezar con una gestión de datos moderna es fácil ZEISS PiWeb reporting ya está incluido en ZEISS CALYPSO y ZEISS CALIGO. The ZEISS PiWeb App provides even more ways to access and analyze measurement data on the go. You can easily create elaborate reports which combine multiple parts and data from different measurement systems into one document. Predefined templates and samples make it easy to get you started and provide a basis to tailor each report to your specific requirements. Acceso desde cualquier lugar Desde una conexión segura a Internet se pueden consultar desde cualquier lugar y los representa en forma de informes. De esta forma los datos de calidad de diferentes sistemas de medición de distintos fabricantes están disponibles desde cualquier parte del mundo en tiempo real. Se trabaja de forma intuitiva arrastrando y soltando campos mientras al usuario le guían menús de diálogo. Dispone de muchos modelos estándar que pueden modificarse según las necesidades.

De esta forma es posible analizar las relaciones entre parámetros de procesos y características de calidad. Esta información ayuda, p. ej., a evitar errores de producción y tiempos de inactividad de herramientas. Se puede importar y exportar datos QDAS. Todos los datos mostrados permanecen conectados a la base de datos. A través del visor PiWeb Monitor se accede a los informes interactivos. Se puede, por ejemplo, girar y ampliar una vista CAD. Puede acceder a información detallada haciendo clic en un punto de medición. Puede filtrar datos además de seleccionar otras fuentes de datos. ZEISS PiWeb reporting ya ofrece un sistema profesional de elaboración de informes y el seguimiento de los valores de las últimas diez mediciones. ZEISS PiWeb reporting plus permite hacer análisis estadísticos de hasta 1.000 mediciones y estudios de repetibilidad y reproducibilidad de la calibración. ZEISS PiWeb sbs ha sido diseñado para la gestión de datos de calidad de salas de medición y pequeñas empresas. ZEISS PiWeb enterprise se dirige a grandes empresas y permite también capturar datos globales y de distintos centros. You will benefit not only from shorter machine setup times, but also from greater accuracy. From manual pallet placement right up to the fully automated process control system, the PRESET erosion module lets you measure offset and rotation when exchanging erosion electrodes in a matter of minutes. The graphic user guidance helps you configure the measuring run. CNC extensions are available for square and round basic geometries. First of all, the zero point is set on the clamping system. You can then select a macro and probe the electrode as well as the workpiece. You can generate your own macros in the macro library without difficulty. In the following step a file featuring the offset data is available, which can then be either directly exported or transferred to job manager software. In addition, PRESET can read in all standard CAD formats.

Then simply send us the following information.
